## DONALD E. WORSTER

**D**onald E. Worster is a leading environmental historian of the West and a major contributor to the New Western history. Born in the Mojave desert, he grew up on the Great Plains, received his Ph.D. in history from Yale, and in 1989 became Hall Distinguished Professor of American History at the University of Kansas. Currently he is researching the thoughts and life of John Wesley Powell, the 19<sup>th</sup> century scientist, explorer, and conservationist.

As environmentalist as well as historian of the environment, Professor Worster has made creative and significant contributions in both areas. From 1981 to 1983 he served as president of the American Society for Environmental History; he has directed the Cambridge University Press series, *Studies in Environment and History*; he has been on the Board of Directors of The Land Institute and the Kansas Land Trust; he has served on the editorial board of a number of environmental journals and the *Western Historical Quarterly*; and he is currently director of the Program in Nature, Culture, and Technology at Kansas. Dr. Worster's first book, *Nature's Economy: The Roots of Ecology* (1977), his edited collection of essays, *The Ends of the Earth: Perspectives on Modern Environmental History* (1988), and his *The Wealth of Nature: Environmental History and the Ecological Imagination* (1993), which was nominated for the Pulitzer Prize, explore, respectively, the history of ecology before the mid-twentieth century, an interdisciplinary review of global environmental topics, and the relationships of history and ecology in personal essays, talks and articles.

Professor Worster's sometimes controversial interpretations have achieved widespread recognition and prestigious awards. In 1979 he applied his environmentalist perspective to the Great Plains in *Dust Bowl: The South-*

*ern Plains in the 1930s* which received the Bancroft Prize that year for the best book in American history. In looking beyond the impact of drought and high winds, Worster pointed to the destructive impact of technology and a materialistic, capitalistic culture that shaped commercial agriculture on the plains. In *Rivers of Empire: Water, Aridity, and the Growth of the American West* (1985), which was nominated for the Pulitzer Prize, Worster's provocative synthesis impressed one reviewer as "unquestionably the keystone in the arch built by environmental historians during the last twenty years." With a significant focus on California, Worster develops the concept of a "hydraulic society", the social order that built the dams, canals and irrigation systems that shaped the cities and agriculture of California and Arizona.

In his contributions to the New Western history, Professor Worster has probed the relationship of the frontier to the West and the nature of the West. Building on Walter Prescott Webb's view of the West as region rather than process with aridity as the most distinguishing characteristic, Worster contends that the West derives its identity from "ecologically adapted modes of production", the life of the cowboy and shepherd, and the life of the irrigator and water engineer. In *Under Western Skies: Nature and History in the American West* (1992), Worster offers a series of essays that further define the uniqueness of the West as largely public domain that generated a lasting tension and dialogue between the federal government and westerners.

Worster's most recent book, *An Unsettled Country: Changing Landscapes of the American West* (1994) further demonstrates Worster's integration of environmental history and western history. These essays also point to his current project, the life of John Wesley Powell.

## William Paul Whitsett 1875-1965

**D**uring W. P. Whitsett's long life he achieved much in the fields of mining, irrigation, and real estate. To each he brought optimism, and impressive competence. His exciting era and area was southern California early in this century. In a practical sense the region flourished in a post-frontier period of grand designs and gigantic risks.

Whitsett was born on December 27, 1875, at Whitsett, Pennsylvania, into a family which had pioneered in coal mining and coke production in the Pennsylvania hills. His father was Ralph C. Whitsett, a doctor. His mother, Emma Ross Whitsett, was descended from Betsy Ross. They were of English, Irish, and Scottish ancestry.

Unfortunately, his father contracted tuberculosis and went to Colorado for recovery. In the following months, he, Emma, and their two daughters died of "consumption." Fortunately, this was a close family, so Paul's grandparents took care of the children who survived. Summers the boy worked on the family farm, and later he had a job in the Whitsett company store.

The family was deeply religious, as Whitsett would always be, and they hoped he might become a minister, but Paul preferred the business world. For a short time he worked in the family coal mines to earn extra money to attend Southwest State Normal School at California, Pennsylvania. The resourceful youth also sold Bibles to help pay his way. Most of all young Whitsett enjoyed being his own boss. Even that early he impressed people with his sense of timing, ability to predict future trends, and an eagerness to act on these talents.

After his graduation with a degree in business administration, he completed a commercial course at Farmington College in Ohio. Later, in Chicago, Whitsett developed skills as a coal entrepreneur. Times appeared poor for such a decision, for in 1896 the nation had not fully recovered from the Panic of 1893. In America's second city Paul and his brother Ralph founded the R. B. Whitsett Coal Company. Luck beckoned in the form of an Illinois coal strike. Whitsett bought the coal from Kentucky and got draft horses from Indiana to haul the much desired product for his fortunate customers.

While W. P. Whitsett worked in Chicago he met and married a Pennsylvania socialite, Sarah Haddock, on June 14, 1899. They would have three

children, Katharine, later Mrs. Wilton Still, Frank, and Paul.

Despite crises of labor and supply, which he ably handled, the next few years saw Whitsett's coal business in Kentucky, Pennsylvania, and Indiana clearly prospering. Still a young man in his late twenties who seemed a dynamo of strength, Whitsett paid heavily for overworking. Like his parents and sisters before him, he contracted tuberculosis and had to retreat to a high, dry and sunny climate. Ironically, just as his father had, he was forced to leave his young wife and children in the east. Indeed, his life was taking a serious turn, but again his luck held, for in the Southwest his greatest days and sixty more wonderful years were ahead.

Whitsett had never known real despair, and the medical odds did not conquer him now. He decided to "think healthfully," as he later recalled. Always in love with the outdoors and particularly with this spectacularly beautiful scenery in New Mexico's Rockies, he took up riding and began to improve. Meanwhile, he had sold out his Indiana coal mines for \$135,000, and after paying debts had \$30,000 left for investment.

### ARRIVAL IN CALIFORNIA

At thirty in 1905, Whitsett made the most important move of his life. His wife's grandfather, Charles G. Haddock had moved to Los Angeles, California, some years earlier and become a volunteer booster for its climate and opportunities. Ever since the railroad had arrived in the 1870s, Los Angeles had been a "sanitarium," its fine weather, agricultural fertility, and natural beauties vaunted by eastern and western advertisers. With the influx of thousands of health seekers, land investors, retirees, and tourists, Los Angeles city doubled every decade, and by 1900 its population had reached 102,000. None of these economic and cultural potentials and the possibility of a full cure from tuberculosis were wasted on the tall, slender man who had already begun to wear his lifelong trademarks, a bow tie and a wing collar.

In southern California, Whitsett decided to develop land near Huntington Park. Now he had

been transformed into a land developer. Wisely, he chose a tract, which he named Walnut Lawn, and invested \$30,000 in it. He divided his forty acres into 198 lots with 50-foot frontages and 135-foot depths. His years as a health seeker in the dry Southwest had taught Whitsett that water was the most indispensable ingredient. Therefore he irrigated Walnut Lawn. He also built and sold buyers houses cheaply, thus profitably dispensing with them all. It was most impressive salesmanship, especially because as Whitsett's personal boomlet was developing, the nation—and California—were suffering from the Panic of 1907.

### FOUNDING VAN NUYS

The San Fernando Valley, where W. P. Whitsett would craft his greatest claims to fame was the site of the San Fernando Mission, founded in 1797 by California's Franciscan padres near one of the few good local water sources. In the Mexican Era of California the mission's Indian converts developed extensive farming and grazing on unusually fertile fields.

The valley developed as a cattle-raising area while northern California had its gold rush. After a severe cattle-killing drought in the early 1860s, it turned to wheat. Now as the twentieth century began water resources were about to be increased via Owens Valley. Los Angeles' rapid-transit system of the day, trolley cars, would provide transportation for a growing city whose citizens could be fed from valley acres, or could live in the San Fernando Valley and commute daily to a city job. The Los Angeles Suburban Homes Company was established by a small group of leading merchants and developers. They bought the Los Angeles Farming and Milling Company's 47,000 acres of the former wheat ranch of the two Isaacs, Messrs. Van Nuys and Lankershim. In 1911, Whitsett joined them, buying an undivided half-interest in the town-site of Van Nuys. A friend suggested he name the new town Van Nuys, and Whitsett readily agreed.

Enthusiastically, Whitsett, now 35, called his new lands among the richest and best in California, but to the inexperienced eye those acres looked like a wasteland. There were no light fixtures, water pipes, gas, or telephone facilities. Train service appeared but twice a week. Yet, Whitsett's advantage was to act now while others "were waiting for conditions to improve."

For months Whitsett planned the formal founding of Van Nuys to occur on Washington's Birthday, February 22, 1911, and the selling of its first lands. There would be a mammoth barbecue that day, with Senor Jose Romero serving the food with good old legendary Mexican California hospitality, tradition, and cuisine. A great multitude had stormed the Southern Pacific depot in downtown Los Angeles to get to Van Nuys, while roads into the valley were covered with cars. Initial sales totaled \$125,935.75, representing actual cash payments of \$39,606.37.

In the early days, 1911-1912, several writers commented on the interesting growth of Whitsett's Van Nuys. Warren McIntire, calling San Fernando the "Valley of Opportunity," described Van Nuys as "the story of how big men have done things in a big way and builded up a rich section from an almost unvisited and little known wheat acreage." Events moved with astonishing speed. Van Nuys boasted a post office by August 18, 1911; its first journal, the *News* appeared on August 24, and on December 4, a \$50,000 bond issue was carried in the less than year-old town for schools; eighty votes favored it against minimal opposition. The Pacific Electric's streetcar tracks reached Van Nuys on December 18. As one might have expected in a town founded by W. P. Whitsett, the Chamber of Commerce was founded on April 20, 1912, and electric lights gleamed on July 20, followed on August 3, 1912 by the first Harvest Festival, boosted by the founding father.

Reminiscing in 1932 at Van Nuys' "coming of age" at twenty-one, its founder offered an insight:

"Many years ago I originated the slogan 'The Town That was Started Right,' and have endeavored to have it lived up to always. Having been brought into existence, the care and nourishment of the self-supporting stage fell to me. Continuing the comparison with a child, we may say that in its early years the infant city, precocious and lusty as it was, required eternally vigilant care. It required nursing, a proper financial and development diet, including the feeding of productive industries fast enough to create naturally, healthy growth but not so fast as

to induce community indigestion. As all infants do, it had to be literally supported during its early years and until it could begin to toddle and then walk.'

### VAN NUYS COMES OF AGE

Blessed with a seemingly endless supply of ideas for improving his community, it is no surprise that Whitsett was dubbed by one California historian "San Fernando Valley's Godfather." Whitsett knew of Petaluma, California's center of poultry and eggs production north of San Francisco. He believed that its climate and soils were similar to Van Nuys' and concluded that, "instead of taking three or four years in the case of fruit, your money from the chicken ranch comes in every day."

Accordingly, he took several Van Nuys ranchers to Petaluma and convinced them what profits were possible. He had an architect develop an ideal chicken house based on the most successful ones at Petaluma. Whitsett had encouraged Swiss dairy farmers to settle there. His two young sons grew White Rose potatoes, sold them on the roadside, and won first prize for them at the State Fair in Sacramento.

W. P. Whitsett, always planning ahead, had gotten experts from Colorado to prove that Van Nuys was ideal for the crop. He succeeded in convincing the powerful Southern Pacific, until that time considered the "Octopus" of California economics and politics, to reduce its rail rate to Van Nuys, and he made up the difference between what he wanted for tourists and the price the SP would give.

To help finance this California cornucopia which was beginning to feed an emerging Los Angeles metropolis, Whitsett became a banker! He established the Bank of Van Nuys in 1922 and the Provident Building and Loan Association in 1925. He called the former "thoroughly a Van Nuys community organization." Its stock was widely owned within Van Nuys. In 1926, the bank, which then had \$1,250,000 in resources, merged with the Security-First National Bank of Los Angeles. His building and loan association, of which he was first president, was called during the Depression one of the soundest in California. It catered to small farm loans.

### GARDEN ACRES

Whitsett's persistent dream for one-acre farm homes in the San Fernando Valley sheds much light on his philosophy of a strong backboned individualism, earned self-respect, and healthy optimism that he believed were at the center of Americanism. He admitted readily that this was no original idea of his. Thomas Jefferson's belief in the blessings of a wholesome and moral rural life as opposed to too great urbanization had inspired many. Whitsett had adopted the ideal from his grandfather, Ralph Whitsett, who instilled a love of rural life and reverence for farming as basic to all of man's endeavors. The elder Whitsett had encouraged his coal mine employees in bad times to turn to the land for their living. As we have seen, the grandson's bank and loan company encouraged investing in small plots.

In 1932, W. P. Whitsett presented the Garden Acre Homes plan to build three hundred houses in three years. A coined motto, Whitsett advanced the phrase "Better Homes for Less Money on 'Garden Acres.'" In his several visits to Europe he was impressed by peasants who worked in towns or cities and commuted to their residences where they could produce their own food and sell a little at local markets. As he put it, "I went to Germany, France, Belgium and other countries and saw their small, neat farms, carefully cared for and wonderfully productive. They seemed very happy."

He advocated lots as small as 100 by 300 feet, large enough for truck gardens in his "Valley of Content." This also reflected his deep faith in the dependable richness of California soils, a belief that had made him and Van Nuys rich in previous years. Whitsett saw, too, that workdays would soon be shortened, giving local workers more time for growing things. Here was the ideal region for his suburban garden-farms with their "food, health, a home, security, and independence"

To Whitsett, words always meant action. He formed groups of five families to carry out the crusade under his Whitsett Group Plan. He reasoned that members of these families could form "car pools" to go downtown from their neighboring homes to a common workplace, return together as cheaply as one rider could, and en route discuss the problems and methods of farming and the workplace. Whitsett was concerned that land prices were falling during the Depression and be-

lieved his plan would stop the turning of the valley into an area of shacks.

Through his practical experiences as a self-made expert on water, Whitsett was appointed as a commissioner of the board of the Los Angeles Department of Water and Power in 1924. In his new post he argued for limiting the admission of new communities to the city's water, for by the mid-twenties it was certain that the city would need even more water. His five years in this important position made him the ideal man to be appointed chairman of the newly-formed Metropolitan Water District of Southern California.

It was obvious that Los Angeles, which as a city would pass the million population mark by 1930, would have to look eastward to the Colorado River. Since that stream and its tributaries were shared by seven Southwestern states, the federal government was to be involved. In 1928, the United States' Johnson-Swing Act, of which Whitsett had been a key proponent, signaled construction, and the several independent cities of southern California, including Los Angeles, formed the Metropolitan Water District, to get abundant water and power. As Chairman of the Board, Whitsett spearheaded passage of the \$220 million bond issue in 1931, in the depths of the great recession. This made possible the construction of Hoover Dam on the Colorado.

As Chairman, Whitsett was always under political pressure from vendors, contractors, and others seeking influence. He also succeeded in getting a large dam. Its vital role would be seen after Pearl Harbor as America entered World War II and southern California greatly expanded as a war industries base.

Whitsett learned to use the radio effectively to make many speeches, as earlier he had used the press. This time he sold Californians on the importance of the project. There were many grouseurs, some in high positions, who believed that the project was too difficult to complete, and that Los Angeles would never grow large enough to need its costly facilities.

History vindicated Whitsett. He believed that "Divine Providence opened the eyes and the minds and the souls of our people to the true vision of a great and growing future of this country." No wonder Whitsett was named "Los Angeles' Most Useful Citizen" in 1938. He retired from his history-making post on January 10, 1947, after eight reelections unanimously to the job.

## ACHIEVEMENTS

Although the founder of Van Nuys lived quietly and without pomposity, he was generous in his charities. He gave plots of land to various Van Nuys churches and to the San Fernando Valley Boy Scouts, and was honorary president of the group. A building he donated let them use the money for scouting purposes and his largess helped them acquire Camp Whitsett in the Sequoia National Park vicinity. He also had a friend of his build a dam there, thus creating a lake so city boys could learn to swim in its quiet waters. He contributed \$50,000 and the land to the Valley Presbyterian Hospital.

W. P. Whitsett was a member of the Christian Church, a Republican, and a Mason. He was also active in the Los Angeles Athletic Club and the Hollywood Country Club. W. P. Whitsett's life underlined emphatically his philosophy.

One day at his church he spoke briefly of his credo, that religion should always be a key factor in one's business, and he who had overcome so many health problems said, "Fear creates that which it fears. Faith may build its vision into reality." He also observed, "When the Good Lord created this earth of ours He provided a job for every man, woman, and child in it—for He intended man, made in His image, to be a co-creator with Him."

After 89 years of a full life he died on April 8, 1965. His funeral was held in the Little Church of the Flowers at Forest Lawn, Glendale.

He had seen Van Nuys grow from 250 people in 1911, to 18,000 during the Depression of the 1930s, to 57,000 in 1950. By 1965 the Valley had passed the million mark, having about five times as many people as our largest state, Alaska. A prominent avenue in that valley had been named for him.

Few human beings have such monuments. He had made converts to his opinions, back-boned by strong convictions and visions. W. P. Whitsett's great adventure set many patterns for the present and future development of southern California.

(Condensed from *W.P. Whitsett: A Biographical Sketch*, written by Professor John Baur (1922-1993) of the Department of History of California State University, Northridge, and published by the Whitsett Committee, 1987. Copies may be obtained from the Whitsett Committee.)

**The W. P. Whitsett California Lecture Series** was founded in 1986 as part of the Whitsett Endowment at California State University, Northridge, to honor the memory of William Paul Whitsett and his pioneering role in the history of the San Fernando Valley.

The Whitsett Lectures are designed to encourage a broader understanding and appreciation of the history, the development, and the future prospects of California and the West.

Sponsors of the lectures are the Whitsett Endowment, Phi Alpha Theta, and the Whitsett Committee of the Department of History.
